

## 1 P4 C6 — Beyond the certified boundary

**Status: Skipped. C6 was not attempted.** This document is a status record, not a solution to C6 or a claim about the general disjoint-congruence-class conjecture.

The [P4 final write-up](#) states the completed scopes separately: Lean proves the theorem through size 12, written reduction with independently replayed computation certifies sizes through 16, and the claimed C5 boundary is 14 because its additional rule-on/rule-off benchmark is completed through that size. The [P4 progress record](#) marks C6 as skipped while open-conjecture work is paused.

No full C6 proof, new case beyond those certificates, platform submission, or organizer acceptance is claimed.
